ABOUT

Dr. Ariel Noyman is an urban scientist, architect, and urban designer whose work explores how design and technology can **democratize data-driven urban processes**. Trained and practiced as an architect and urban designer, he bridges urban analytics, simulation, and participatory design across research, practice, and teaching. At MIT, Noyman developed CityScope, an urban human-computer interaction platform for real-time simulation and collaborative planning, deployed in more than twenty cities worldwide. He also helped establish a global network of City Science living laboratories active in over twelve cities. His work has received international recognition, including a European Union UrbanAct Award, first place in Rebuild by Design, and first prize in the Museum of Tolerance design competition. He has published widely and taught urban science, urban design, and architecture design studios at MIT, Cornell, Northeastern University, CUNY, and Bezalel Academy of Arts and Design. He holds a Ph.D. and SM from MIT and a B.Arch, cum laude, from Bezalel Academy.
